Stats with geoms

INTERMEDIATE DATA VISUALIZATION WITH GGPLOT2

Rick Scavetta
Founder, Scavetta Academy

datacamp
ggplot2, course 2

- Statistics

- Coordinates

- Facets

- Data Visualization Best Practices

Statistics layer

- Two categories of functions
  - Called from within a geom
  - Called independently

- `stats_`

geom_ <-> stat_

```
p <- ggplot(iris, aes(x = Sepal.Width))

p + geom_histogram()
```
geom_ <-> stat_

```
p <- ggplot(iris, aes(x = Sepal.Width))
p + geom_histogram()
p + geom_bar()
```

geom_ <-> stat_

```
p <- ggplot(mtcars, aes(x = factor(cyl),  fill = factor(am)))
p + geom_bar()
p + stat_count()
```
The geom_/stat_ connection

stat_	geom_
stat_bin()	geom_histogram() , geom_freqpoly()
stat_count()	geom_bar()

stat_smooth()

```
ggplot(iris, aes(x = Sepal.Length,
                 y = Sepal.Width,
                 color = Species)) +
  geom_point() +
  geom_smooth()
```
```
geom_smooth() using method = 'loess' and
formula 'y ~ x'
```

stat_smooth(se = FALSE)

```
ggplot(iris, aes(x = Sepal.Length,
                 y = Sepal.Width,
                 color = Species)) +
    geom_point() +
    geom_smooth(se = FALSE)
```
```
geom_smooth() using method = 'loess' and
formula 'y ~ x'
```

geom_smooth(span = 0.4)
```
ggplot(iris, aes(x = Sepal.Length,
                 y = Sepal.Width,
                 color = Species)) +
  geom_point() +
  geom_smooth(se = FALSE, span = 0.4)
```

```
geom_smooth() using method = 'loess' and
formula 'y ~ x'
```

geom_smooth(method = "lm")

```
ggplot(iris, aes(x = Sepal.Length,
                 y = Sepal.Width,
                 color = Species)) +
  geom_point() +
  geom_smooth(method = "lm", se = FALSE)
```

# geom_smooth(fullrange = TRUE)

```r
ggplot(iris, aes(x = Sepal.Length,
                 y = Sepal.Width,
                 color = Species)) +
    geom_point() +
    geom_smooth(method = "lm",
                fullrange = TRUE)
```

The geom_/stat_ connection

stat_	geom_
stat_bin()	geom_histogram() , geom_freqpoly()
stat_count()	geom_bar()
stat_smooth()	geom_smooth()

Other stat_ functions

stat_	geom_
stat_boxplot()	geom_boxplot()

Other stat_ functions

stat_	geom_
stat_boxplot()	geom_boxplot()
stat_bindot()	geom_dotplot()
stat_bin2d()	geom_bin2d()
stat_binhex()	geom_hex()

Other stat_ functions

stat_	geom_
stat_boxplot()	geom_boxplot()
stat_bindot()	geom_dotplot()
stat_bin2d()	geom_bin2d()

stat_contour()	geom_contour()
stat_quantile()	geom_quantile()
stat_sum()	geom_count()

Stats: sum and quantile

Rick Scavetta
Founder, Scavetta Academy

Recall from course 1

|	Cause of Over-plotting	Solutions
1.	Large datasets	Alpha-blending, hollow circles, point size
2.	Aligned values on a single axis	As above, plus change position
3.	Low-precision data	Position: jitter
4.	Integer data	Position: jitter

Plot counts to overcome over-plotting

	Cause of Over-plotting	Solutions	Here...
1.	Large datasets	Alpha-blending, hollow circles, point size	
2.	Aligned values on a single axis	As above, plus change position	
3.	Low-precision data	Position: jitter	`geom_count()`
4.	Integer data	Position: jitter	`geom_count()`

Low precision (& integer) data
```
p <- ggplot(iris, aes(Sepal.Length,
                      Sepal.Width))

p + geom_point()
```
Jittering may give a wrong impressions

```
p + geom_jitter(alpha = 0.5,
                width = 0.1,
                height = 0.1)
```
geom_count()

```
p +

  geom_count()
```

The geom/stat connection

geom_	stat_
geom_count()	stat_sum()

# stat_sum()

```
p +
    stat_sum()
```

Over-plotting can still be a problem!

```
ggplot(iris, aes(Sepal.Length,
                 Sepal.Width,
                 color = Species)) +

  geom_count(alpha = 0.4)
```
geom_quantile()

```
ggplot(iris, aes(Sepal.Length,
                 Sepal.Width,
                 color = Species)) +
  geom_count(alpha = 0.4)
```

Dealing with heteroscedasticity
```
library(AER)

data(Journals)

p <- ggplot(Journals,
            aes(log(price/citations),
                log(subs))) +
  geom_point(alpha = 0.5) +
  labs(...)

p
```

Using geom_quantiles

```
p +

  geom_quantile(quantiles =

              c(0.05, 0.50, 0.95))
```

The geom/stat connection

geom_	stat_
geom_count()	stat_sum()
geom_quantile()	stat_quantile()

Stats outside geoms

INTERMEDIATE DATA VISUALIZATION WITH GGPLOT2
Rick Scavetta
Founder, Scavetta Academy

datacamp

Basic plot

```
ggplot(iris, aes(x = Species,
                 y = Sepal.Length)) +

  geom_jitter(width = 0.2)
```

Calculating statistics

```r
set.seed(123)
xx <- rnorm(100)
mean(xx)
```

```
[1] 0.09040591
```

```r
mean(xx) + (sd(xx) * c(-1, 1))
```

```
[1] -0.822410  1.003222
```

Calculating statistics

```r
set.seed(123)
xx <- rnorm(100)

# Hmisc
library(Hmisc)
smean.sdl(xx, mult = 1)
```

```
      Mean       Lower       Upper
 0.09040591 -0.82240997   1.00322179
```
```r
# ggplot2
mean_sdl(xx, mult = 1)
```

```
         y       ymin       ymax
1 0.09040591 -0.82241   1.003222
```
stat_summary()

```
ggplot(iris, aes(x = Species,
                 y = Sepal.Length)) +
  stat_summary(fun.data = mean_sdl,
               fun.args = list(mult = 1))
```

- Uses `geom_pointrange()` by default
stat_summary()

```
ggplot(iris, aes(x = Species,
                 y = Sepal.Length)) +
  stat_summary(fun.y = mean,
               geom = "point") +
  stat_summary(fun.data = mean_sdl,
               fun.args = list(mult = 1),
               geom = "errorbar",
               width = 0.1)
```

Not recommended!

95% confidence interval

```r
ERR <- qt(0.975, length(xx) - 1) * (sd(xx) / sqrt(length(xx)))
mean(xx)
```

```
0.09040591
```

```r
mean(xx) + (ERR * c(-1, 1)) # 95% CI
```
```
-0.09071657  0.27152838
```

```r
mean_cl_normal(xx)
```

```
         y        ymin      ymax
0.09040591 -0.09071657 0.2715284
```

Other stat_ functions

| stat_	Description
stat_summary()	summarize y values at distinct x values.
stat_function()	compute y values from a function of x values.
stat_qq()	perform calculations for a quantile-quantile plot.

MASS::mammals

Normal distribution

```r
mam.new <- data.frame(body = log10(mammals$body))

ggplot(mam.new, aes(x = body)) +
  geom_histogram(aes( y = ..density..)) +
  geom_rug() +
  stat_function(fun = dnorm, color = "red",
                args = list(mean = mean(mam.new$body),
                            sd = sd(mam.new$body)))
```
QQ plot

```
ggplot(mam.new, aes(sample = body)) +
    stat_qq() +
    geom_qq_line(col = "red")
```
